Question 1b)

```
In [3]: U = np.array([[1, 0], [0, 1], [0, 0], [0, 0]])
        S = np.array([[1, 0], [0, 0.5]])
        Sinv = np.linalg.inv(S)
        V = np.eye(2)
        X = U @ S @ V.T
        y = np.array([[1], [0.5], [1], [0]])
        ### Find Least Squares Solution
        w_ls = V @ Sinv @ U.T @ y
        c = y.T @ y - y.T @ X @ w_ls
        ### Find values of f(w), the contour plot surface for
        w1 = np.arange(-1,3,.1)
        w2 = np.arange(-1,3,.1)
        fw = np.zeros((len(w1), len(w2)))
        for i in range(len(w2)):
            for j in range(len(w1)):
                w = np.array([ [w1[j]], [w2[i]] ])
                fw[i,j] = (w-w_ls).T @ X.T @ X @ (w-w_ls) + c
        ### Plot the countours
        plt.figure(num=None, figsize=(4, 4), dpi=120)
        plt.contour(w1,w2,fw,20)
        plt.xlim([-1,3])
        plt.ylim([-1,3])
        plt.xlabel('$w_1$')
        plt.ylabel('$w_2$')
        plt.axis('square');
```

Question 1c)

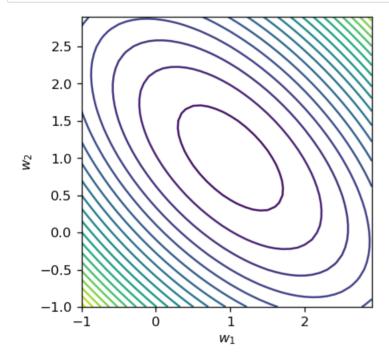

```
In [4]: ## Copy and paste code from 1b
        U = np.array([[1, 0], [0, 1], [0, 0], [0, 0]])
S = np.array([[1, 0], [0, 0.2]])
        Sinv = np.linalg.inv(S)
        V = np.eye(2)
        X = U @ S @ V.T
        y = np.array([[1], [0.5], [1], [0]])
        ### Find Least Squares Solution
        w_ls = V @ Sinv @ U.T @ y
        c = y.T @ y - y.T @ X @ w_ls
        ### Find values of f(w), the contour plot surface for
        w1 = np.arange(-1,3,.1)
        w2 = np.arange(-1,3,.1)
        fw = np.zeros((len(w1), len(w2)))
        for i in range(len(w2)):
             for j in range(len(w1)):
                 w = np.array([ [w1[j]], [w2[i]] ])
                 fw[i,j] = (w-w_ls).T @ X.T @ X @ (w-w_ls) + c
        ### Plot the countours
        plt.figure(num=None, figsize=(4, 4), dpi=120)
        plt.contour(w1,w2,fw,20)
        plt.xlim([-1,3])
        plt.ylim([-1,3])
        plt.xlabel('$w_1$')
        plt.ylabel('$w_2$')
        plt.axis('square');
```

It makes the contour's ellipses more eccentric that is the gradient along w2 decreases (the slope becomes less intense).

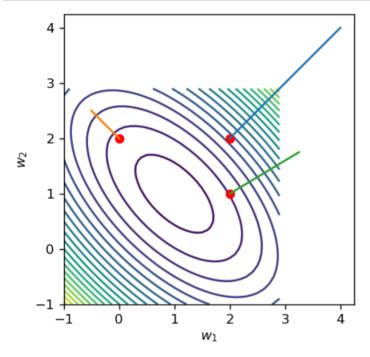

Question 1d)

```
In [5]: ## Copy and paste code from 1b
        ## Copy and paste code from 1b
        U = np.array([[1, 0], [0, 1], [0, 0], [0, 0]])
S = np.array([[1, 0], [0, 0.5]])
        Sinv = np.linalg.inv(S)
        V = \text{np.array}([[2**-0.5, 2**-0.5], [2**-0.5, -1*(2**-0.5)]])
        X = U @ S @ V.T
        y = np.array([[2**0.5], [0], [1], [0]])
        ### Find Least Squares Solution
        w_ls = V @ Sinv @ U.T @ y
        c = y.T @ y - y.T @ X @ w_ls
        ### Find values of f(w), the contour plot surface for
        w1 = np.arange(-1,3,.1)
        w2 = np.arange(-1,3,.1)
        fw = np.zeros((len(w1), len(w2)))
        for i in range(len(w2)):
            for j in range(len(w1)):
                 w = np.array([ [w1[j]], [w2[i]] ])
                 fw[i,j] = (w-w_ls).T @ X.T @ X @ (w-w_ls) + c
        ### Plot the countours
        plt.figure(num=None, figsize=(4, 4), dpi=120)
        plt.contour(w1,w2,fw,20)
        plt.xlim([-1,3])
        plt.ylim([-1,3])
        plt.xlabel('$w 1$')
        plt.ylabel('$w_2$')
        plt.axis('square');
```

It changes the orientation of the eliiptical contours from being arranged along wi, w2 axes to axes that are at an angle to w1, w2.

```
In [6]: wi = np.array([[2],[2]])
        wii = np.array([[0],[2]])
        wiii = np.array([[2],[1]])
        gradi = 2* X.T @ (X@wi-y)
        gradii = 2*X.T @ (X@wii-y)
        gradiii = 2*X.T @ (X@wiii-y)
        ### Plot the countours
        plt.figure(num=None, figsize=(4, 4), dpi=120)
        plt.contour(w1,w2,fw,20)
        plt.plot(wi[0,0], wi[1,0], 'ro')
        plt.plot([wi[0,0],wi[0,0]+gradi[0,0]], [wi[1,0],wi[1,0]+gradi[1,0]])
        plt.plot(wii[0,0], wii[1,0], 'ro')
        \verb|plt.plot([wii[0,0],wii[0,0]+gradii[0,0]], [wii[1,0],wii[1,0]+gradii[1,0]])|\\
        plt.plot(wiii[0,0], wiii[1,0], 'ro')
        plt.plot([wiii[0,0],wiii[0,0]+gradiii[0,0]], [wiii[1,0],wiii[1,0]+gradiii[1,0]])
        plt.xlim([-1,3])
        plt.ylim([-1,3])
        plt.xlabel('$w_1$')
        plt.ylabel('$w_2$')
        plt.axis('square');
```

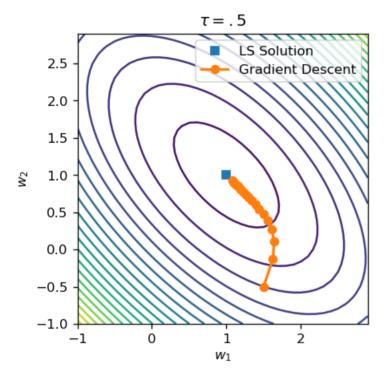

Question 2a)

The maximum value of Tau that will guarantee convergence is 2.

Question 2b)

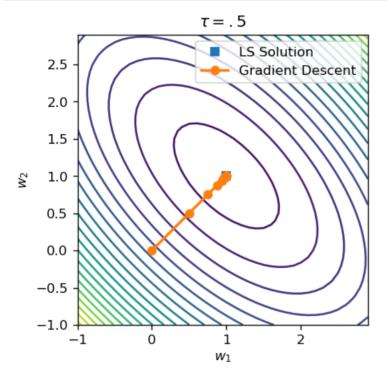

```
In [7]: U = np.array([[1, 0], [0, 1], [0, 0], [0, 0]])
        S = np.array([[1, 0], [0, 0.5]])
        Sinv = np.linalg.inv(S)
        V = 1/np.sqrt(2)*np.array([[1, 1], [1, -1]])
        X = U @ S @ V.T
        y = np.array([[np.sqrt(2)], [0], [1], [0]])
        ### Find Least Squares Solution
        w_ls = V @ Sinv @ U.T @ y
        c = y.T @ y - y.T @ X @ w_ls
        ### Find values of f(w), the contour plot surface for
        w1 = np.arange(-1,3,.1)
        w2 = np.arange(-1,3,.1)
        fw = np.zeros((len(w1), len(w2)))
        for i in range(len(w1)):
            for j in range(len(w2)):
                w = np.array([ [w1[i]], [w2[j]] ])
                fw[i,j] = (w-w_ls).T @ X.T @ X @ (w-w_ls) + c
```

```
In [8]: w_init = np.array([[1.5],[-0.5]]) # complete this line with a 2x1 numpy array for the values specified in the action in the actio
```

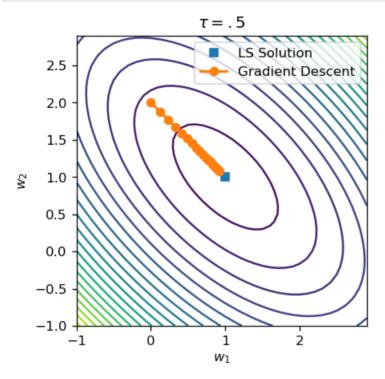

```
In [9]: w_init = np.array([[0],[0]]) # complete this line with a 2x1 numpy array for the values specified in the activity it = 20
    tau = .5
W = graddescent(X,y,tau,w_init,it);

### Create plot
plt.figure(num=None, figsize=(4, 4), dpi=120)
plt.contour(w1,w2,fw,20)
plt.plot(w_is[0],w_is[1],"s", label="LS Solution")
plt.plot(w[0,:],w[i,:],'o-',linewidth=2, label="Gradient Descent")
plt.legend()
plt.xlim([-1,3])
plt.xlabel('$w_1$')
plt.ylim([-1,3])
plt.ylabel('$w_2$')
plt.title(r'$\tau = .5$');
plt.axis('square');
```

```
In [10]: w_init = np.array([[0],[2]]) # complete this line with a 2x1 numpy array for the values specified in the activity it = 20
    tau = .5
W = graddescent(X,y,tau,w_init,it);

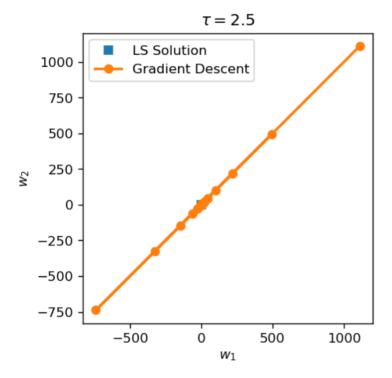

### Create plot
plt.figure(num=None, figsize=(4, 4), dpi=120)
plt.contour(w1,w2,fw,20)
plt.plot(w_ls[0],w_ls[1],"s", label="LS Solution")
plt.plot(w[0,:],W[1,:],'o-',linewidth=2, label="Gradient Descent")
plt.legend()
plt.xlim([-1,3])
plt.xlabel('$w_1$')
plt.ylabel('$w_1$')
plt.ylabel('$w_2$')
plt.title(r'$\tau = .5$');
plt.axis('square');
```

Question 2c)

```
In [11]: # copy and paste code from above
    w_init = np.array([[1.5],[-0.5]]) # complete this line with a 2x1 numpy array for the values specified in the act
    it = 20
    tau = 2.5
    W = graddescent(X,y,tau,w_init,it);

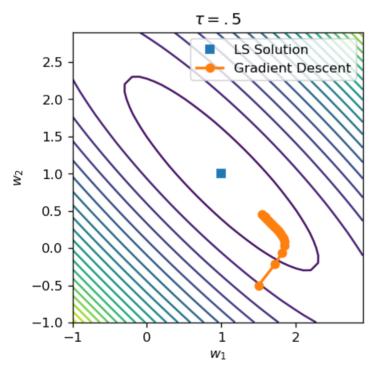

### Create plot
    plt.figure(num=None, figsize=(4, 4), dpi=120)
        plt.contour(w1,w2,fw,20)
        plt.plot(w_ls[0],w_ls[1],"s", label="LS Solution")
        plt.plot(w[0,:],W[1,:],'o-',linewidth=2, label="Gradient Descent")
        plt.slabel()
        plt.xlabel('$w_1$')
        plt.ylim([-1,3])
        plt.ylim([-1,3])
        plt.ylim([-1,3])
        plt.ylim([-1,3])
        plt.ylim([-1,3])
        plt.ylabel('$w_2$')
        plt.title(r'$\tau = 2.5$');
        plt.axis('square');
```

Tau is larger than the maximum value which allows for converge. Thus we get a graph where is no convergence.

Question 2d)

```
In [12]: ## Copy and paste code from above
         U = np.array([[1, 0], [0, 1], [0, 0], [0, 0]])
         S = np.array([[1, 0], [0, 0.25]])
         Sinv = np.linalg.inv(S)
         V = 1/np.sqrt(2)*np.array([[1, 1], [1, -1]])
         X = U @ S @ V.T
         y = np.array([[np.sqrt(2)], [0], [1], [0]])
         ### Find Least Squares Solution
         w_ls = V @ Sinv @ U.T @ y
         c = y.T @ y - y.T @ X @ w_ls
         ### Find values of f(w), the contour plot surface for
         w1 = np.arange(-1,3,.1)
         w2 = np.arange(-1,3,.1)
         fw = np.zeros((len(w1), len(w2)))
         for i in range(len(w1)):
             for j in range(len(w2)):
                 w = np.array([ [w1[i]], [w2[j]] ])
                 fw[i,j] = (w-w_ls).T @ X.T @ X @ (w-w_ls) + c
         w_init = np.array([[1.5],[-0.5]]) # complete this line with a 2x1 numpy array for the values specified in the ac
         it = 20
         tau = .5
         W = graddescent(X,y,tau,w_init,it);
         ### Create plot
         plt.figure(num=None, figsize=(4, 4), dpi=120)
         plt.contour(w1,w2,fw,20)
         plt.plot(w_ls[0],w_ls[1],"s", label="LS Solution")
         plt.plot(W[0,:],W[1,:],'o-',linewidth=2, label="Gradient Descent")
         plt.legend()
         plt.xlim([-1,3])
         plt.xlabel('$w_1$')
         plt.ylim([-1,3])
         plt.ylabel('$w_2$')
         plt.title(r'$\tau = .5$');
         plt.axis('square');
```

The step size we plot gets even smaller ad smaller, so if we assume changes to the singular value is really small, we make the contours flatter and which slows the trajectory and thus convergence will take really long.

Question 2e)

Small ratio of the singular values leads to more iterations to get to convergence, and therefore results in a flatter cost function.
